

ITAR: International Traffic in Arms Regulations Statement

Continuing in our demonstrated commitment to total quality assurance, STRAN has been registered with the US Department of State as an ITAR compliant manufacturer since September 3, 2008. As the ITAR regulations are intended to ensure that delivery of both military product and related technical information only be shared with US persons, export of STRAN military product is handled via a rigorous process of screening, documentation and export license application through the Department of State's DTRADE system. Though interpretation of what constitutes ITAR-controlled material is subject to interpretation, and sadly not universally embraced by others in our market, STRAN's policy of interpretation of the United States Munitions List as it relates to our product is the most conservative in the industry.

Incorporated into STRAN's AS9100 certified Quality Assurance System, we have implemented companywide training and maintain controlled documents covering all the critical aspects of ITAR compliance, including;

- Recordkeeping
- Reporting
- Screening
- Product control plans
- Vendor flow down
- Export classification matrix
- Visitor control
- Exemption rules
- Training records

Consequently, STRAN customer's who similarly share our diligence and commitment to ITAR, have come to rely on STRAN as a partner and integral element of their export controls risk mitigation strategy. In a very real sense, *STRAN has your back!*

ITAR Registration Code M23527
